Master of Science in Architecture

The Irwin S. Chanin School of Architecture

Apply!

**Application deadline
is January 30, 2026.**

The Master of Science in Architecture is a three-semester post-professional degree program in New York City. The studio- and seminar-based curriculum, culminating in a design research thesis project, approaches architectural discourse critically—questioning the very boundaries of architecture itself.

The Irwin S. Chanin School of Architecture is pleased to announce two Adjunct Instructor positions for graduating M.S.Arch students to support instruction during a subsequent semester and to offer valuable teaching experience.

A designated STEM program, allowing international graduates to extend their F-1 visas up to three years.
