ADVISOR: PROF. TOBY CUMBERBATCH

Working and living with communities and cultures in widely varying geographical locations, the Live-In, Living Laboratories investigate the principles of self-build, stand-alone, naturally driven, economically viable human support systems. They provide a space within which advanced technology is blended with the arts of water collection, passive temperature control and sustainable agriculture—a dialog between the old and the new, and the rich and the poor about the demands of humankind and the natural resources available. First steps were taken in fall 2016 in Saugerties, NY and continue this summer in Bongo, Ghana.
